Transform your production with AGV-supported automation concepts

Effective production logistics – dynamic and flexible

You are in search of innovative automation technology for your production? Our AGV solutions are the answer!

The term AGV (Automated Guided Vehicle) describes a driverless, floor-bound transport vehicle. Equipped with state-of-the-art navigation systems, AGVs transport raw materials and products with precision and efficiency within defined workflows. Become part of the logistics revolution!

- **Efficient:** AGVs operate continuous and autonomous
- **Flexible:** Solutions with low and high lift function
- **Innovative:** Cost-efficient, optimised room concepts
- **Functional:** Seamless integration into existing systems
- **Adaptive:** Retrofit and capacity upgrades optional
- **Safe:** Equipped with cutting-edge security features

DIOSNA's system integration: **Your benefits**

01 Analysis & Concept

Initially, a detailed analysis of your processes is conducted. We advise you in realising your plans and create an initial concept for discussion.

02 Consultation & Planning

The analysis data forms the foundation for a comprehensive simulation. The goal is a needs-oriented, well thought-out holistic solution.

03 Project engineering & Implementation

Smooth process integration without long downtimes is our top priority. All components are manufactured quickly and precisely. On-site commissioning is supervised by us.

04 After-Sales-Service

Our focus lies on the trouble-free performance of your processes. As a strong, innovative partner, we also support you after commissioning with our wide range of services.
